

DL compliment slip template

Finished size: 210x99mm

Bleed area

If the coloured background of a layout extends to the edge of the sheet the artwork must extend over the intended trim marks. This produces a far more professional result on the edges of the page.

Inside margin

Safe area that should not include any vital information. Visually, it keeps the text and graphics from "falling off the page" by providing a buffer zone. It also allows for binding the material with staples, three ring binders, or other methods.
